About Me

Junior Full Stack Developer with 1 year of experience in Laravel, Node.js, React.js, and Vue.js. Built production-ready healthcare and sports management platforms. Focused on writing clean code and solving real business problems.

Skills

- Laravel
- Node.js
- React.js
- Vue.js
- TypeScript
- Tailwind
- Bootstrap
- MySQL
- PostgreSQL
- Electron.js
- Playwright
- Git/GitHub

Education

BS in Software Engineering (2026–2030)

Virtual University of Pakistan

Work Experience

Full-Stack Developer | Softleed | July 2025 – Present

Career Progression:

- Intern (Jul-Sep 2025)
Intensive hands-on training → mastered React, Vue, Laravel, and Playwright
- Full Stack Developer (Sep 2025 – Present)
Own end-to-end delivery of features across 4+ live projects including Medical-Home, Tracklo, and Teego

Projects I have Contributed To:

Medical-Home (Fullstack)

Healthcare scheduling portal – Vite, React, TypeScript, Express, Sequelize, Microsoft Bookings API

- Built Staff Panel, Pharmacist Panel, and Admin CRUD pages (clinics, staff, pharmacists)
- Integrated clinical booking modal in Patient Panel with form validation using Formik & Yup
- Worked on ManageBookingProvider.tsx to sync calendars with Microsoft Bookings API
- Used IndexedDB for offline data and Axios interceptors for API error handling
- Helped reduce manual admin work by automating SMS booking alerts via Twilio

Tracklo (Multiple sub-projects)

Project management + test automation tools – Laravel, Playwright, Redis, PHP

- Softleed Dashboard: Created database models for projects, test cases, and reports using Laravel Eloquent
- Taskly: Built notification system with email + database drivers and Redis queues for background tasks
- Tracklo_Tests: Wrote entire E2E test suite from scratch using Playwright (parallel execution, role-based login)
- Worked with WebSockets (Laravel Reverb) for real-time activity logs

Personal Projects

CampaignOS (Fullstack)

AI campaign manager – React 19, Node.js, Express, PostgreSQL, WebSockets, Docker, OpenAI API

- Developed an AI creative brief generator using OpenAI API with SSE streaming to render live suggestions.
- Built a real-time analytics dashboard with WebSockets and Recharts for live campaign health monitoring.
- Designed a secure PostgreSQL database schema using UUIDs, JSONB, and JWT-based API rate limiting.
- Containerized the entire multi-service application with Docker to ensure consistent environment deployments.

FileFusion (Fullstack)

Multi-cloud storage manager – Laravel 12, Vue.js 3, Bootstrap 5, MySQL, OAuth 2.0, Google Drive & OneDrive APIs

- Unified Google Drive and OneDrive storages into a single dashboard using Laravel 12 and Vue 3.
- Integrated secure third-party OAuth 2.0 flows to authenticate users and fetch real-time cloud file hierarchies.
- Developed an advanced search and filtering system for instant cross-cloud file discovery and sorting.
- Implemented bank-grade data encryption for storage access tokens and detailed user activity audit logs.
